

Catalogue Tools 11.5 • Release Notes

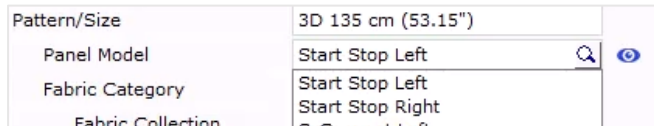

November 16, 2020

News & Changes

- On the **Geometry** tab, you can now add products to other products when creating a datasymbol. This enables you to configure and edit products together with other products from a data catalogue, and save the resulting product as one datasymbol instead of individual ones.

- Added ability to hide sub-features in the Schemes tab; simply click the eye icon next to a feature to hide it.

- Added support for Schemes to be available in the Schemes Explorer when they were published to a portfolio and not limited to toolbox only.
- Improved information in error message shown when the Misc folder is missing.
- Added a warning icon when a feature without a group code is added to the layout. The icon comes with an explanatory tooltip to help clarify why it is showing.
- The **More Properties** button, to access the object's scheme settings directly, will now appear in the Property box for catalogue scheme objects but this is dependent on your Extensions to support this functionality.

Bugfixes

- Improved performance when switching models on a Product that has many Features and Options.
- Fixed problem with Filtering on Package Count (Pkg. Count) that could cause filtering to not work correctly.
- Fixed problem with extraction of preview images that would incorrectly save them to the Materials folder instead of the Previews folder.
- Fixed problem with Copy/Paste that could cause pasting to not work depending on which copy/paste commands were used (keyboard shortcut/right-click menu/interface buttons).
- Fixed problem with the Scheme builder that could prevent grouping by Manufacturer code.
- Fixed problem with Scheme preview that could lead to the scrollbar disappearing.
- Fixed problem with the Scheme builder that would cause the Numeric Order feature to show up in the Property box as a dropdown instead of a text field.
- Fixed problem with the Scheme builder that could cause overlapping text when scrolling the contents of some boxes.
- Updated Scheme for Catalogue symbols to support the new Picking tool that was added to other Schemes with this release.
- Fixed problem with Scheme builder that prevented the correct tab from being automatically selected when the Preview was opened.
- Fixed problem where a nested feature under a numeric feature was not correctly displayed in the quick properties box and the Calculation dialog.
- Fixed problem with the Dimension column on the Product Tab not accepting changes to the measurement value.
- Fixed problem with Connectors being moved in the 2D/3D view when zooming in/out.
- Fixed problem with Models not correctly updating the graphics of all parts when the width was stretched in the 2D/3D view.
- Fixed problem with custom Materials that could result in the material losing its custom resolution when saved.
- Fixed problem that could cause Redirect messages for catalogues to not correctly display.
